

VOX Valvetronix Preset Amp Model Settings

The following diagrams summarize the main settings of each of the eleven amp models used by the VOX Valvetronix AD15/30/50/100VT series amplifiers. These Top Panel diagrams have been trimmed down and the layout slightly rearranged to fit all eleven diagrams on a single printable page. Effects settings are left out, since they are not truly necessary to define the characteristic tone of each model. All settings were determined from an AD30VT using the "Original Values" method described on page 14 of the Owner's Manual.
